PROFESSIONAL SUMMARY

Motivated and ambitious Junior Software Engineer with a solid foundation in engineering web applications and backend systems using ASP.NET Core, C#, and SQL Server. Passionate about creating elegant, efficient, and maintainable code, with a keen eye for detail and problem-solving. Driven to contribute to impactful real-world projects, including POS systems, inventory management, and business applications, while constantly learning cutting-edge technologies and applying best practices in software development.

PROFESSIONAL EXPERIENCE

Lead Full-Stack Developer (Contract / Freelance)

NexCash POS & ERP Project | Remote | June 2025 - May 2026

- Managed a 3-member development team through the full software development lifecycle (SDLC) to successfully build and deliver NexCash, a comprehensive Point of Sale and Enterprise Resource Planning system.
- Developed the application using 4-layer MVVM Clean Architecture principles to ensure strict separation of concerns, high testability, and long-term maintainability.
- Designed robust database schemas using SQLite, improving query performance by 30% and securing full transactional integrity for 10,000+ potential daily entries.
- Created 40+ rich, responsive user interfaces using WPF, which streamlined business workflows and reduced manual data entry time by 25%.
- Directed version control and team collaboration workflows utilizing Git and GitHub, maintaining a 95% clean merge rate across 3 development branches.
- Delivered 100% of production-ready core modules to the client exactly on schedule after a rigorous 1-year development cycle.

PROJECTS

Point of Sale (POS) Desktop System / NexCash

C#, WPF, SQLite

- Programmed a full-featured desktop POS system for restaurants using C#, WPF, and SQLite.
- Built a robust database for managing orders, inventory, billing, and customer data.
- Developed an intuitive user interface for quick order processing, payments, and receipt printing.
- Automated inventory management to update stock levels in real-time after each sale.

Hotel Management System

C#, Windows Forms, SQL Server

- Implemented a desktop hotel management system using C# and Windows Forms for managing reservations, guest records, rooms, and billing.
- Configured a robust SQL Server database to handle room availability, inventory, and customer data efficiently.

EDUCATION

Bachelor of Science in Information Technology, Hadhramaut University *Fuwwah, Mukalla, Hadhramaut, Yemen | 02/2022 - 08/2026 (Expected)*

- Relevant Coursework: Software Engineering, Database Management Systems, Object-Oriented Programming (OOP), Data Structures & Algorithms, Clean Architecture, Onion Architecture Patterns.

TECHNICAL SKILLS

Programming Languages:
C#, C, Python, C++, HTML5, CSS3, Bootstrap, Object-Oriented Programming

Frameworks & Technologies:
ASP.NET Core, Entity Framework Core, RESTful APIs, JSON, LINQ, WPF, Windows Forms

Architecture & Patterns:
Layered Architecture, Onion Architecture, Clean Architecture, MVVM, SOLID Principles

Databases:
Microsoft SQL Server, PostgreSQL, SQLite

Tools & Version Control:
Git, GitHub, Visual Studio, Postman, CI/CD Basics

Soft Skills:
Problem-Solving, Troubleshooting, Team Collaboration, Time Management, Critical Thinking, Adaptability
